

Pradeep T

Mobile: +91 9842752513

Email: pradeepthirumoorthyofficial@gmail.com

LinkedIn: <https://www.linkedin.com/in/pradeep-thirumoorthy>

SKILL SUMMARY

Tools/Platforms: Python, SQL, AWS, MS Excel (Advanced), Power BI, Tableau, Git, SPSS, IBM Cognos, SAP Datasphere

Technical Skills: Machine Learning, Data Analytics, Cloud and Data Strategy, Financial Modelling, Portfolio Management

Power Skills: Problem Solving, Critical Thinking, Leadership, Teamwork, Communication, Adaptability

INTERNSHIP

IMPACTRA CONSULTING

Marketing and Finance Intern

Jun 2026 – Aug 2026

- Computed net tax liabilities and designed tax-optimized employee CTC structures using Budget tax slabs, deductions (80C –80D) and taxation rules
- Evaluated key financial sectors (BFSI) and analyzed diverse portfolio management strategies to align asset classes with client investment objectives
- Sourced and analyzed structured feedback from 70+ potential clients to identify demand drivers and refine targeting for retail insurance products
- Collected and analyzed 132 survey responses to evaluate the real-world impact of pre-GST and post-GST taxation on public consumers of insurance products.
- Successfully executed and delivered 16 cross-functional projects across marketing and finance, driving firm target objectives and strategic client deliverables

PROJECTS

AI-Powered Portfolio Intelligence Platform

Jul 2026 – Present

- Engineered a custom Quantitative Scoring Engine to evaluate equities against financial statements (Balance Sheet, P&L, Cash Flow) and automated fundamental metric extraction via web scraping
- Integrated a Gemini-powered AI assistant and financial ratio information system, delivering formula breakdowns, contextual interpretations, and data-driven insights from an investor's perspective
- Automated live stock price tracking via real-time web scraping on Screener.in, ensuring real-time valuation updates
- Designed dashboards to monitor real-time asset allocation, sector trends, and stock performance to optimize portfolio
- Currently developing an AI Quantitative Advisor with RAG implementation to deliver automated portfolio rebalancing strategies, risk assessment, and actionable reorganization plans

Investment Risk Simulator (Monte Carlo Method)

Feb 2026 – Mar 2026

- Quantified downside portfolio risk and tail events by computing 95% Value at Risk (VaR), measuring potential capital shortfall from median projections across 1 to 100-year investment horizons
- Engineered a Monte Carlo simulation running 2,000+ GBM iterations using the Box-Muller transform to model asset price drift and volatility
- Tracked median and extreme outcome ranges across time steps to visualize asset growth and volatility boundaries
- Formulated real-net return models factoring in expected returns, inflation drag, and expense ratios to stress-test long-term capital preservation
- Synthesized statistical outcome distributions by generating 30-bin frequency histograms, identifying modal outcome ranges, and deriving empirical probabilities of reaching target wealth goals versus shortfall risk

Food Panda Sales & Operational Intelligence Dashboard

Dec 2024 – Mar 2025

- Built a 4-page Power BI dashboard to track ₹4.80M in revenue, 3,000+ customers, and sales trends across 5 cities
- Analyzed customer behavior across age and gender, tracking a 50.27% retention rate and payment habits across Cash, Cards, and Wallets to identify order frequency patterns
- Evaluated menu sales and customer loyalty distribution, showing that Italian and Fast-Food categories drove the highest repeated orders and loyalty point earnings
- Monitored delivery operations and tracked service bottlenecks, analyzing 1,972 delays and 1,968 order cancellations
- Used interactive flow charts and breakdown trees to easily trace why orders were delayed or cancelled by location and food item

Fake Content Detection in social media using Deep Learning | Team Leader

- Conducted research on detecting false content on social media and discovered a significant gap in existing methodologies in the truth seeker dataset
- Built a hybrid DeBERTa - BiLSTM model to accurately read and detect patterns in social media text as project leader
- Trained and tested the system on the TruthSeeker dataset containing over 130,000 labeled tweets, using extra user details like bot probability, credibility, and influence scores
- Improved training and reduced errors using the AdamW optimizer to reliably identify real and fake social media posts
- Evaluated model performance across different classification tasks, reaching 96.95% accuracy with 0.97 precision and recall on the 3-class setup, and around 55% accuracy on the fine-grained 5-class setup

ACHIEVEMENTS

- | | |
|---|----------|
| • Engineered custom HR platform for Mangalathu Granites, generating ₹10K in revenue LPU | Dec 2025 |
| • Secured 2nd place in 24 hours hackathon and earning a ₹3000 cash prize KEC | Apr 2024 |
| • Secured 3rd place in the Idea Presentation event at l'Haltons 2K24 KEC | Mar 2024 |
| • Won 1st place in the Site Sculpture event at SDF Fest 2K24 KEC | Feb 2024 |

PUBLICATIONS

- | | |
|--|---------------------|
| A Hybrid Intrusion Detection System Using ML Grenze International Journal | Jun 2024 – Mar 2025 |
| • Engineered a hybrid Intrusion Detection System (IDS) combining various machine learning algorithms into an ensemble classifier, significantly boosting anomaly detection accuracy, precision, and recall | |
| • Implemented a two-stage feature selection pipeline using Recursive Feature Elimination (RFE) and SelectKBest to eliminate noise and isolate statistically significant attack indicators | |
| • Benchmarked model performance on the NSL-KDD dataset, rigorously evaluating multidimensional attack vectors and standard network traffic patterns to validate real-time threat resilience | |
| • Deployed the ensemble model in a simulated live environment, successfully identifying real-time anomaly patterns with high precision | |

CERTIFICATIONS

- | | |
|--|----------|
| • Predictive Analytics using SPSS Modeler – Advanced IBM | Apr 2026 |
| • Financial Modelling using Excel and AI LPU | Mar 2026 |
| • IBM Cognos Analytics V11.1 IBM | Feb 2026 |
| • Introduction to Industry 4.0 and Industry Internet of Things NPTEL | Oct 2024 |
| • Research Methodology NPTEL | Sep 2024 |

EDUCATION

- | | |
|--|---------------------|
| Lovely Professional University | Phagwara, Punjab |
| Master of Business Administration – Business Analytics & Finance; CGPA: 8.75 | Aug 2025 – Present |
| Kongu Engineering College | Erode, Tamil Nadu |
| Bachelor of Engineering – Computer Science and Engineering; CGPA: 8.19 | Oct 2021 – Mar 2025 |
| Kongu Vellalar Matric. Hr. Sec. School | Erode, Tamil Nadu |
| HSC - 91.79% | Jun 2020 – Mar 2021 |
